

# Syncing Your Desktop Files Across Multiple Computers

## Using OneDrive

⚠ Note: If this is your first time logging into OneDrive, you can skip the next 2 steps.

- OneDrive is disabled by default on Windows computers and only becomes active once you sign in to the OneDrive application on each computer workstation.
- Once OneDrive starts syncing, it will merge the desktop contents across all computers where OneDrive is actively running.

### Step 1: Visit [Desktop Sync Setup with OneDrive](#)

The synchronization process in OneDrive can take anywhere from 30 minutes to a few hours, depending on the amount of data stored on your desktop and bandwidth.

If you need help logging into MNHC OneDrive,

Visit: [How To Log Into MNHC Website or Outlook-OneDrive](#)
